
Webometrics, Informetrics and Bibliometrics – How useful are these Indicators for Measuring Knowledge?

ESSHRA

June, 12-13, 2007 in Berne

Tunger / Ball, Research Centre Juelich, Germany
Herget, HTW Chur, Switzerland

Agenda

1. Introduction
2. Scientific communication
3. Bibliometrics – Scientometrics –
Informetrics – Webometrics
4. Summary

Scholarly Communication and Digital Science

Scientific Journals

De Solla Price, 1963,
Little Science – Big Science, p. 9

Scientific Publications

Number of Articles in ISI International

Scientific Publications on fuel cells

Definitions

Bibliometrics

is a study or measurement of formal aspects of texts, documents, books and information.

Scientometrics

analyses the quantitative aspects of the production, dissemination and use of scientific information with the aim of achieving a better understanding of the mechanisms of scientific research as a social activity.

Informetrics

is a subdiscipline of information sciences and is defined as the application of mathematical methods to the content of information science.

Webmetrics

is the application of informetrical methods to the World Wide Web (WWW).

Definitions

Mike Thelwall, Liwen Vaughan & Lennart Bjorneborn: Webometrics *in*: Ann. Rev. Of Information Science & Technology (2006), p. 84

Traditional Bibliometric indicators

Statistics on Publications and citations by focussing

- a range of Publication Years
- a special Document Type
(review article, research article, Book, ...)
- a Subject / Topic
- an Institution
- ...

Citation and publication networks

Relationship between citation rate and downloads for a physics article over a set period of time

Summary

- Bibliometrics can give an overview of scientific activity
- The traditional Citation System is still the main tool for bibliometrics
- Bibliometric analyses are used in a standardised way for the STM-Sector
- Webmetrics makes a new quantitative correlations possible
- It will be interesting, what kind of changes of the communication process in science will be measured
